

## Assignment-1

Bhavika Arage

1. Create registration page in html with username, email and phone number and by using POST method display it in next html page.

Registration.html

```
<!DOCTYPE html>

<html>

  <head>

    <meta charset="utf-8">

    <meta http-equiv="X-UA-Compatible" content="IE=edge">

    <title>Regis form</title>

    <meta name="description" content="">

    <meta name="viewport" content="width=device-width, initial-scale=1">

    <link rel="stylesheet" href="">

    <script type="text/javascript">

      function getData()

      {

        //getttting the values

        var username = document.getElementById("username").value;

        var email = document.getElementById("Email").value;

        var mobile= document.getElementById("mobile").value;

        console.log(username,email,mobile)

        //saving the values in local storage

        localStorage.txtValue=username;

        localStorage.txtValue1=email;

        localStorage.txtValue2=mobile;

      }

    </script>
```

```

</head>

<body>

    <h1>Register here</h1>

    <div style=" font-size: 30px;  color: rgb(32, 7, 63); text-align:
center;">

        <form action="success.html">

            <label>Username :</label>

            <input type="text" name="username" id="username" required><br>

            <label>Email :</label>

            <input type="email" name="Email" id="Email" required><br>

            <label>Phone number :</label>

            <input type="text" pattern="\d*" minlength="10" required
name="mobile" id="mobile"><br>

            <input type="submit" value="Submit" onclick="getData();">

        </form>

    </div>

</body>

</html>

```

Success.html

```

<!DOCTYPE html>

<html lang="en">

<head>

    <meta charset="UTF-8">

    <meta http-equiv="X-UA-Compatible" content="IE=edge">

    <meta name="viewport" content="width=device-width, initial-scale=1.0">

    <title>Success</title>

</head>

<body>

    <div style=" font-size: 30px;  color: rgb(32, 7, 63); text-align: center;">

```

```
<div style="font-size: 40px; color: red; margin: 0 auto;">
```

```
    Here's Your data
```

```
</div>
```

```
The username is equal to: <span id="data"> User </span><br>
```

```
The email is equal to: <span id="data1"> Email </span><br>
```

```
The Mobile is equal to: <span id="data2"> Number </span><br>
```

```
</div>
```

```
<script type="text/javascript">
```

```
    //displaying the value from local storage to another page by their  
    respective Ids
```

```
document.getElementById("data").innerHTML=localStorage.getItem("txtValue");
```

```
document.getElementById("data1").innerHTML=localStorage.getItem("txtValue1");
```

```
document.getElementById("data2").innerHTML=localStorage.getItem("txtValue2");
```

```
</script>
```

```
</body>
```

```
</html>
```

Register here

Username :   
Email :   
Phone number :

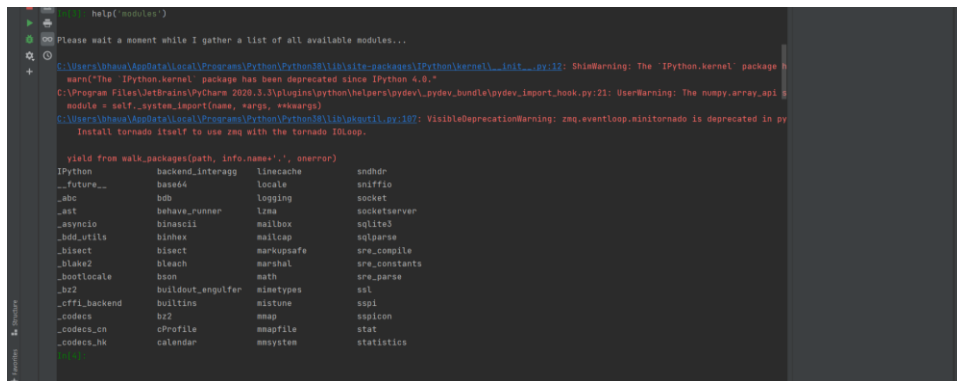

Here's Your data  
The username is equal to: bhavika  
The email is equal to: a@g  
The Mobile is equal to: 1231231231

## 2. Develop a flask program which should contain atleast 5 packages used from pypl.org.

- a) Runpy
- b) Flask
- c) Ibm\_db
- d) Import
- e) Html

And others
